Swivel Adapter

*with Two Fiber Optic Bronchoscopy Caps*

This adapter swivels to allow the respiratory circuit to assume a natural angle, reducing drag and uncomfortable pressure. To allow for bronchoscopy procedures, a special cap, fitted over the suctioning port, has a flexible diaphragm that seals around the bronch/fiberscope. 25/box

**Item Number**

#04-625191

Lightweight Swivel Adapter

This lightweight adapter features a port for suctioning. It swivels in two planes, allowing the respiratory circuit to assume a natural angle so that it does not drag and cause uncomfortable pressure on the margin of the stoma.

Dual swivel angled trach connector approx. 105° angle
The Gentle-Haler is a pocket-sized spacer that utilizes a sophisticated, patented transducer system by Vortran Medical to produce warm, dense, low velocity aerosol of primarily 1 - 3 μm particles. This helps to eliminate cold blasts, coughing, gagging and results in less oropharyngeal deposition.

Most spacers are too large to carry in the pocket or purse so patients do not use them regularly. When it comes to spacers, size matters. This is confirmed by a study comparing the clinical responses of asthmatic patients using the Gentle-Haler versus the AeroChamber. There was no difference between them clinically, but 72% of the patients preferred the Gentle-Haler because of its size and ease-of-use.

MEDICOMP’s Metered Dose adapters are easy to use and offer the maximum delivery of beta-adrenergic agents.

The #EG-MC-1423 and #EG-MC-1523 are perfect for the periodic in-line administration of the mist bronchodilators. The mist port includes a tethered cap and accepts standard pressurized canisters. #EG-MC-1523 diverts the at a 90° angle to spray directly into the patient’s airstream. This method results in the agent, with maximum set-up and administration.
